

GVA Lighting set to launch Color-Stream® at LightFair

May, 2023

Creative and innovative lighting experts GVA Lighting will be exhibiting at this year's LightFair.

The biennial show is taking place at the Javits Centre in New York, encompassing a five-day conference between 21-25 May, and a three-day trade show between 23-25 May.

GVA Lighting will be at booth 2909 and will be using the exhibition to present its new Color-Stream® Technology and Product Platform. This all-new method of delivering power and controlling LEDs offers exceptional performance and outstanding flexibility for specifiers, who will now be able to combine superior communication speeds (6.25 Mbps with a refresh rate of up to 200Hz) with super-fine dimming (4,096 micro-steps at 40kHz) at even longer single lighting circuit lengths.

GVA's flagship technology Infinity®, goes further, from 300 meters to 600 meters for monochromatic, color-changing and dynamic white luminaires with 100+ meter long leader and jumper cables that allow for flexible installation layouts. Color-Stream® features smaller pixel resolution for GVA's linear fixtures: 75mm and 150mm is a new benchmark for GVA's Highlighter® and STR9 luminaires. Extreme system surge protection of up to 20kV/10kA is the new standard for surge sensitive applications (towers, bridges, skyscrapers). Furthermore, the brain of the Color-Stream® architecture – Power-Data Converter Gen 5 (PDC5) can control a network of up to 64 DMX universes or 32 DMX universes per circuit, when connected to Art-Net 4 source.

GVA's plethora of remarkable technologies and numerous cutting-edge advancements will be demonstrated at the booth, representing the forefront of scientific and engineering by GVA Lighting. The exhibition will provide a unique opportunity to witness first-hand the remarkable technology to shape the future of lighting.

Vladimir Grigorik, GVA Lighting's Chairman, President, and CTO, said: "LightFair is an excellent opportunity to showcase our latest developments, as the event focuses on future-shaping technologies. Color-Stream® is elevating the global standards for lighting systems utilized in intricate applications. Regarded as a benchmark, this cutting-edge technology sets forth exceptional performance and exceeds expectations. We're sure it will be a big draw to the GVA Lighting booth."

John Zhu, Head of Sales, North America, added: “GVA Lighting always welcomes the opportunity to meet with existing and potential clients at exhibitions. LightFair is incredibly well-attended, so we’re looking forward to a busy event, presenting our newest and most technologically-advanced solutions.”

As well as Color-Stream®, GVA Lighting will be presenting updates for their flagship Infinity® and Color-Amp® technologies.
