FOR IMMEDIATE RELEASE

## GVA Lighting opens an office in London, UK

**Unique INFINITY® technology promotion is behind company's recent expansion into the United Kingdom.**

**Mississauga, ON (Apr. 16, 2015) – GVA Lighting, Inc.**, a Canadian manufacturer of LED Lighting systems for professional architectural illumination, announced today the opening of a new office in the United Kingdom as the most recent effort to promote its newest technology to British and European architects and lighting designers.

The GVA's INFINITY® technology allows running 300+ meter long lighting circuits from a single power and data source and it is a great solution for illumination of large infrastructure projects: skyscrapers, long bridges, airports and shopping malls. INFINITY® helps to overcome many design challenges: penetrations into the building to feed the luminaires are no longer required, the system reliability is increased, luminaires are very compact and easy to install.

"London is the global capital of design and architecture. GVA has developed a unique tool for architectural illumination. We have to be there to promote our ideas and to serve European specifiers on professional and timely manner" said Vladimir Grigorik, Founder and President of GVA Lighting.

A continuous emphasis on developing and retaining talented people remains the firm's key driver of success. In line with this principle, David Stramazotti who worked as the Export Manager for Europe was promoted to a new role as the General Manager and will oversee the entire operation of this branch.

GVA Lighting Europe Limited is located at 223-1 Filament Walk, London, SW18 4GQ, United Kingdom. Contact the office at +44 (0) 79 6002 6935 or [europe@gvalighting.com](mailto:europe@gvalighting.com).
